

Elefren S.B. Antonio

Team Leader, Technical Services – West

Whether it's wiring up a concert venue for a major international performer or installing new cooling systems for an entire commercial area, Jeje Antonio and his team have the skills, experience and know-how to get the job done quickly –and well.

Among Jeje's accomplished projects is amping up the energy capacity of the SM Arena -two weeks ahead of schedule –for the massively monstrous Lady Gaga concert. He was involved in helping Ayala Land install new type of switchgear with metering equipment for the Ayala Center Redevelopment Phase 1, covering Glorietta 1 and 2, Holiday Inn, and the Makati-Ayala BPO 1 and 2. Jeje also assisted Resorts World Manila during the relocation of underground facilities to give way to the construction of additional buildings.

Jeje joined Meralco in 2002 and received his bachelor's in Electrical Engineering from the Technical University of the Philippines. He also has some units in the Master of Engineering program from the Mapua Institute of Technology
