

Rene Y. Sua

Team Leader, Construction Group

Rene knows all about putting detail into retail; his responsibilities include managing the power requirements of the SM group, and he previously handled the needs of supermarket chain Puregold. His previous portfolio covered a range of commercial customers like The Net Group, and industrial customers like steel mills and paper mills, giving him a broad perspective on the kinds of solutions needed for different power users.

Rene began his career in Meralco as a Cadet Engineer, having graduated from University of the Philippines (Diliman) with a Bachelor of Science degrees in Electrical Engineering. He swiftly moved up and around, first working as a Design Engineer, where he was also involved in major infrastructure undertakings like LRT-2, MRT-3, Skyway, and DPWH Flyover and Flood Control Projects. He then moved to the Pasig Sector to gain a wider perspective of the engineering process. This is where he acquired practical experience handling different teams like Contract Administration, Construction & Maintenance, Special Line Equipment Maintenance, and Operations. After five years, he again shifted gears to join the Corporate Business Group.

Already a licensed Professional Electrical Engineer, Rene leavened his know-how with an MBA from De La Salle University, where he finished as a Silver Medalist
