

Gabriel C. Delfin

Head Relationship Manager, Food and Beverage Group

From office buildings to food manufacturers, from textile makers to the Ninoy Aquino International Airport, Gee Delfin's roster of over 30 clients certainly keeps his hands full and his mind busy. When he's not providing technical advice on equipment maintenance, he's constantly helping his customers monitor power quality and distribution to ensure their continuous operation. Gee is also the industry point person when it comes to the outlook and market trends for the food and beverage manufacturing sectors.

Having joined Meralco in 1987 as a Junior Staff Engineer, Gee has had much experience completing projects out in the field. He has been involved in numerous studies involving transmission and distribution improvements and correcting system abnormalities like line outages, fluctuating and unbalanced voltages, and line equipment failures. Gee has also developed standard procedures and operating policies necessary in maintaining the efficient performance of sub-transmission systems, as well as the optimum reliability of distribution line equipment.

A licensed engineer, Gee is a graduate of the University of Santo Tomas, with a bachelor's degree in Electrical Engineering. He also completed Meralco's Power Engineering Program.
